Monteloederâ??s Metabolaid Secures Health Canada Approval for Seven Health Claims

24 November 2026 | News

This botanical combo is the culmination of extensive collaborative research funded by Spainâ??s Centre for the Development of Industrial Technology and Innovation (CDTI)

Nutraceutical innovator Monteloeder SL, a subsidiary of SuanNutra, SA, attained Health Canada recognition for its clinically supported botanical blend Metabolaid. The composition, crafted to naturally support metabolic wellness, has been granted a Natural Product Number (NPN 80151765) license by Health Canada, providing authorization for the use of multiple health claims associated with weight management and cardiovascular health.

Metabolaid is one of Monteloeder's core formulations and brings together standardized extracts of hibiscus (Hibiscus sabdariffa) and lemon verbena (Lippia citrodora) in synergy to support weight balance and optimum metabolic functioning. This botanical combo is the culmination of extensive collaborative research funded by Spain's Centre for the Development of Industrial Technology and Innovation (CDTI) and builds on 20 years of focused research on lemon verbena.

The new product license allows supplement formulators any of seven health claims for Metabolaid containing products:

Could complement a healthy lifestyle that includes a calorie-reduced diet and regular physical activity for individuals in a weight management program.

Could help to suppress appetite (when taken before a meal) temporarily.

Could help to temporarily reduce food intake(when taken prior to a meal).

Could help to temporarily increase satiety/feelings of fullness (when taken before a meal).

Helps maintain healthy blood pressure levels.

Helps support healthy blood pressure levels.

Helps maintain cardiovascular health.

“Achieving Health Canada authorization marks a significant milestone for Metabolaid,” says Mariana Ortega, Science Marketing Manager for SuanNutra. “The process was particularly rigorous, given the complexity of our botanical blend, the extensive body of scientific evidence supporting its benefits, and the heightened regulatory scrutiny in the weight management category.”
