

## Seragon unveils most advanced anti-aging nutraceutical

08 September 2020 | News

Seragon Pharmaceuticals, Inc., based in the US, has announced the release of RESTORIN<sup>™</sup>, an advanced daily supplement for healthy aging at Lifestyle Expo Tokyo.

### RESTORIN<sup>™</sup> is the first nutraceutical supplement in Seragon's pipeline

Seragon Pharmaceuticals, Inc., based in the US, has announced the release of RESTORIN<sup>™</sup>, an advanced daily supplement for healthy aging at Lifestyle Expo Tokyo.

RESTORIN<sup>™</sup> is a controlled-release NMN supplement with senolytic enhancement. The novel product utilizes a proprietary form of NMN to boost nicotinamide adenine dinucleotide (NAD<sup>+</sup>), the central metabolic cofactor in a number of essential biological processes such as mitochondrial respiration and DNA repair.

RESTORIN<sup>™</sup> is engineered with SERC<sup>™</sup> controlled release technology to achieve targeted enteric delivery and efficient absorption of active ingredients. RESTORIN<sup>™</sup>'s health benefits are further enhanced with several compounds carrying sirtuin-activating and senolytic properties.

For years, scientists have focused on evaluating the effects of NAD<sup>+</sup> and its precursors on the biological process of aging. Building on the scientific breakthroughs from leading research institutions, RESTORIN<sup>™</sup> is a proprietary form of oral NMN supplementation designed to optimize cellular metabolism and promote healthy aging.

RESTORIN<sup>™</sup> is the first nutraceutical supplement in Seragon's pipeline, joining a family of innovative products and services that continue to expand the company's contribution to better human health.
