

Myos Corp, Science Biotech to distribute Fortetropin products in Australia & NZ

22 December 2020 | News

MYOS CORP, a US based advanced nutrition company with divisions that address both human nutrition and animal health, has announced that it has entered into an agreement with Science Biotech to exclusively distribute its Fortetropin® products in Australia and New Zealand (NZ).

Fortetropin® is a proprietary advanced nutrition product developed and owned by MYOS

MYOS CORP, a US based advanced nutrition company with divisions that address both human nutrition and animal health, has announced that it has entered into an agreement with Science Biotech to exclusively distribute its Fortetropin® products in Australia and New Zealand (NZ).

Fortetropin® is a proprietary advanced nutrition product developed and owned by MYOS that has been shown in multiple human and veterinary clinical studies to accelerate gains in muscle mass, improve mobility, and enhance recovery from injury.

Fortetropin® is a fertilized egg yolk-based product manufactured via a proprietary process to retain and optimize its biological activity. Fortetropin has been clinically shown to increase muscle size, lean body mass, and reduce muscle atrophy.

Science Biotech will introduce sports nutrition brand, **YOLKED®**, and canine brand **MYOS Canine Muscle Formula®**, into Australia and New Zealand— widely recognized as premier markets for sports supplements and pet products.

In addition to their sports culture, Australians have one of the highest pet ownership percentages in the world with over 61 per cent of the population owning a pet, the majority being dogs. Science Biotech plans to introduce MYOS Canine Muscle Formula to veterinarian practices and larger pet retailers throughout Australia.
