Thailand adds value to F&B market with new cannabis research centre

08 December 2021 | News

Thailandâ??s Public Health Ministry has signed a Memorandum of Understanding (MoU) with RxLeaf World Medica on establishing the International Medical Cannabis Research Centre.

Establishes the International Medical Cannabis Research Centre

Thailandâ??s Public Health Ministry has signed a Memorandum of Understanding (MoU) with RxLeaf World Medica on establishing the International Medical Cannabis Research Centre.

The latest movement is a part of Thailandâ??s plan to be a world-class cannabis production and development hub.

The centre aims to be a knowledge hub for genetic research on medical cannabis, bringing together doctors, researchers, experts from Canada, the Netherlands and other countries to conduct cannabis products research and development while at the same time exchanging the medical cannabis knowledge.

Creating a medical and wellness tourism hub will attract those who prefer integrative medicine and plant-based products such as those developed from herbs for cancer or seizure patients, as well as cosmetics and dietary supplements. Additionally, these products will add value to the food and drink market and allow both farmers and entrepreneurs to grow and develop sustainable products.
