

Tetra Pak invests in four new recycling facilities

28 February 2022 | News

**Tetra Pak has co-invested over €11.5 million with recyclers and industry players, to help set up four completely new recycling solutions for carton packages in Turkey, Saudi Arabia, Ukraine and Australia. From building recycling capacity from scratch via cross-border cooperation (in Saudi Arabia), expanding that capacity by 50% (in Turkey), tripling the production capacity for the cartonsâ?? PolyAl element (in Ukraine) to leveraging a public/ private partnership (in Australia), these projects share one single, critical trait. They will enable the recycling of all components of a used carton package, transforming them into quality materials and goods. **

Tetra Pak has co-invested over €11.5 million with recyclers and industry players, to help set up four completely new recycling solutions for carton packages in Turkey, Saudi Arabia, Ukraine and Australia. From building recycling capacity from scratch via cross-border cooperation (in Saudi Arabia), expanding that capacity by 50% (in Turkey), tripling the production capacity for the cartonsâ?? PolyAl element (in Ukraine) to leveraging a public/ private partnership (in Australia), these projects share one single, critical trait. They will enable the recycling of all components of a used carton package, transforming them into quality materials and goods.

Once fully operational, the new solutions will be able to process up to an additional 45,000 tonnes of used carton packages, enabling global carton package recycling to exceed 50 billion a year. This translates to significantly improved recycling in the respective countries, and in some cases also in the neighbouring ones.

Tatiana Liceti, EVP for Market Operations at Tetra Pak, comments: “Carton packages are recycled across the globe, where efficient waste management and recycling infrastructures are in place. Accelerating this requires all stakeholders to play an active role, including governments, local authorities, producers and consumers. Sustainability is one of the top three priorities for our customers , and these new facilities will help contribute towards meeting their goals.”
