Cleveland, Tennessee can anticipate new economic opportunities from leader in food manufacturing, SK Food Group

Cleveland, Tennessee can anticipate new economic opportunities from leader in food manufacturing, SK Food Group

The State of Tennessee, Bradley County, and the City of Cleveland were selected after an extensive multi-state search across 60+ sites that was assisted by Global Strategy Consultants, a Newmark global real estate services firm. The facility, which will be completed in three phases and will include the latest state-of-the-art automation technology for sandwich assembly and food handling, is expected to be completed in 2025 and includes a special partnership with the PIE Center, a Bradley County Schools educational and industrial training center to provide specialized employee training

Construction will commence later this year and upon completion it will further strengthen SK Food Group's leading industry position and will support local communities through the creation of new job opportunities. Furthermore, the new facility will incorporate environmentally forward-thinking designs including applicable LEED Certifications.

"We are very excited to be adding the Cleveland, TN facility to our growing family of facilities, which span across the U.S.," said Dustin Dixon, President of SK Food Group. "This project will generate 840 new jobs in the Cleveland region by 2030 and will leverage Cleveland's best-in-class technology training program, along with our proprietary training and educational programs, to provide ongoing skills development to community members and allow our company to grow together with the community."

SK Food Group was founded in 1942 as a mobile catering company in Seattle, WA and has since evolved into one of North America's leading custom food manufacturers. Specializing in supplying handcrafted sandwiches, wraps, snacks, flatbreads, burgers, and protein snacks for corporate branding by its clients, they have nine locations across the United States and Canada totaling 913,000 square feet of production space, 2,000 employees and can produce over two million units daily.
