Teestar botanical chewables by Avesthagen Limited is a product designed for sugar and weight management, explicitly targeting pre-diabetic and diabetic healthcare. Teestar is a scientifically formulated nutraceutical using all-natural plant-based ingredients. The product has gained recognition as a finalist for the NutraIngredients-Asia 2023 Award and will be showcased at the Marina Bay Sands in Singapore on September 26 2023.

With an emphasis on preventive care and general wellness, Avesthagen's line of bioactive compounds aims to offer naturally occurring, clinically confirmed treatments for numerous disease-specific health issues like Diabetes and Cardiovascular Health. Teestar chewables are developed to help manage blood sugar levels, particularly after meals, with reported reductions in postprandial blood glucose levels of up to 10 mg/dL. The product also aids in better insulin response.

Teestar is formulated from an Indian medicinal plant that has traditionally been a part of the food matrix. The recommended dosage for Teestar is to consume two chewables before breakfast and dinner daily for optimal results.

Dr. Renuka Jain, President of Avesta Nordic Research Pvt. Ltd., explains that Teestar forms a colloidal-type suspension in the stomach and intestines upon hydration. This leads to slower gastrointestinal transit and digestion of food, resulting in lesser

glucose being absorbed from digested food and a prolonged feeling of satiety.

Teestar is manufactured in a state-of-the-art production and R&D facility using an eco-friendly and safe extraction process that uses only ethanol and water. Using Avesthagen's unique fingerprinting method, MetaGrid, the product's consistency in quality is maintained.
