There will be new flavour creation laboratories, flavour sample bays and dedicated application spaces for bakery, dairy, beverage, and confectionery

Flavour experts I.T.S has acquired a second facility, complete with a state-of-the-art flavour laboratory, close to its existing premises in Newbury, Berkshire, England.

I.T.S.'s new site will feature a modern innovation centre as well as customer product development areas. There will be new flavour creation laboratories, flavour sample bays and dedicated application spaces for bakery, dairy, beverage, and confectionery. The I.T.S microbrewery and bar, currently housed in the existing building and location of many a successful beer flavour tasting, will be given a facelift too and move to the new site.

New warehousing located there will hold both raw materials and finished products on-site. This will ensure that I.T.S. can offer rapid turnaround times and a stable supply to customers. The current I.T.S site will be converted into a purely manufacturing and technical site. This will increase production capacity, allowing I.T.S to dramatically increase its flavour manufacturing capabilities. Established in 2009 by Mike Bagshaw, with a focus on bringing innovation and injecting some fun into the flavours sector, I.T.S now employs 24 people and supplies natural flavours throughout the food and beverage industries. Mike's original vision remains at the heart of I.T.S and it is this approach to being 'brave' with flavour while responding quickly to customer needs that have helped to drive the company's success to date.
