

Mt. Capra recalls goat milk formula recipe kit

16 May 2024 | News

FDA notified Mt. Capra of an adverse event report of anaemia in one infant

FDA notified Mt. Capra of an adverse event report of anaemia in one infant

Healthwest Minerals, Inc. d/b/a Mt. Capra Products of Chehalis, Washington, is recalling 1,506 boxes of Goat Milk Formula Recipe Kit on the recommendation of the Food and Drug Administration (FDA) and advises consumers to immediately discontinue use of the product as infant formula. The FDA is concerned that the formula does not meet all FDA requirements for infant formula, does not provide sufficient nutrition when used as an infant formula, and the storage instructions may be insufficient for the product. Infants consuming the recalled product without additional iron supplementation can develop iron deficiency anaemia and feeding intolerance.

FDA notified Mt. Capra of an adverse event report of anaemia in one infant. FDA determined that while the caregivers were using the Goat Milk Formula Recipe Kit and recipe, the caregivers substituted some ingredients with a different brand of multivitamin, which created a product deficient in vitamin B12 as well as folate and ultimately resulted in the development of anaemia.

The firm does not recommend using this product for infants from 0-12 months of age. If you have prepared and fed your infant Mt. Capra formula from their Goat Milk Formula Recipe Kit, we recommend you contact a healthcare provider to discuss if testing for nutritional deficiencies is recommended.

The safety of our customers and products is Mt. Capra's primary concern. This recall is being made with the knowledge of the U.S. Food and Drug Administration.
