The collaboration kicks off with a beta phase in 2025, with plans to expand deployment across multiple kitchen hubs in Germany

Circus SE, a leading AI robotics company specialising in autonomous kitchen systems, has signed a preliminary agreement with FLC Group, a leading provider of catering services for canteens and community facilities. The partnership aims to introduce Circus Group's food production robot, "Circus Autonomy One" (CA-1), to kitchen hubs across Germany in a two-phase approach starting in 2025. These hubs will support the catering needs of refugee accommodations, emergency shelters, retirement homes, and other community facilities.

The collaboration kicks off with a beta phase, during which one CA-1 unit will be deployed and tested in a catering kitchen in 2025. This initial phase aims to validate the technology's performance and integration within FLC Group's operations. Following a successful pilot, both parties plan to expand the deployment to up to 100 CA-1 robots across multiple kitchen hubs, enabling large-scale production of nutritious meals for diverse communities.

FLC Group, which currently serves over 150,000 meals monthly to refugee accommodations and shelters, will leverage Circus Group's advanced AI and robotics technology to scale its operations more effectively. Designed to produce up to 2,000 freshly prepared meals per day in a compact 7-square-meter space, the CA-1 units will improve efficiency, hygiene and consistency in food service delivery.
