A modern Eggs & Rounds production line will be built in 2025

A modern Eggs & Rounds production line will be built in 2025

Mondelez, the global leader in snacks, announces another strategic investment worth nearly PLN 74 million in the production plant in Skarbimierz, Poland. As a result, a modern Eggs & Rounds production line will be built in 2025, thanks to which the plant will become a key centre for the production of seasonal chocolate products in Europe and strengthen Poland's position in the company's European supply chain.

Mondelez has been consistently investing in modern technologies and environmentally friendly solutions for many years. Poland has been a strategic place on the world map for the company, which has seven factories and a global Research and Development Center in the heart of Europe. The new Eggs & Rounds production line in Skarbimierz will allow for an even better response to consumer needs, providing them with the highest quality products, as well as strengthening the future of the local chocolate industry.

The Skarbimierz plant, covering 65,000 m², has ten advanced production lines, including the pioneering "Future Line", which produces Milka, Oreo, Cadbury and 3Bit snacks that are well-known and loved by consumers.
