

Circus SE to acquire FullyAI to revolutionise human-AI interaction

13 January 2025 | News

Circus will enhance human-AI interactions in labour-intensive industries by integrating FullyAI into its ecosystem, starting with its Physical AI food-service robot, CA-1

Circus will enhance human-AI interactions in labour-intensive industries by integrating FullyAI into its ecosystem, starting with its Physical AI food-service robot, CA-1

Germany-based Circus SE a global leader in Physical AI applications, has announced the intended acquisition of FullyAI, one of Europe’s leading Agentic AI players. The company has developed technologies in the field of AI Agents and counts global corporations such as Meta Platforms and the Ford Motor Company among its customers.

AI Agents mark the next major wave in AI development following the growth of established AI models like ChatGPT or LLaMA. While Generative AI models focus on data analysis and predictions, AI Agents operate autonomously within their environment. AI Agents perform tasks independently by perceiving their environment, making decisions, and executing actions. With the acquisition of FullyAI, Circus positions itself as one of the pioneers in this field.

FullyAI is renowned for its AI Agents that seamlessly guide users through complex service processes to create meaningful human-AI interactions in the physical world. With this acquisition, Circus aims to integrate FullyAI’s innovative technology into its proprietary stack of Physical AI applications, such as the CA-1, to unlock a completely new and unparalleled level of interaction between humans and autonomous robots, further cementing its position as a pioneer in AI-powered solutions for labour-intensive industries such as food-service.
