The Natural PRO-Digest solution combines FrieslandCampina Ingredients's prebiotic Biotis GOS-OP High Purity and Lallemand Health Solutions' probiotic B

Lallemand Health Solutions and FrieslandCampina Ingredients have successfully advanced their established partnership on the concept of Natural synbiotic PRO-Digest. Recent developments have provided comprehensive evidence supporting the synergistic benefits of pre- and probiotics, demonstrating significant positive mechanistic effects on gut health and recognised overall by real-life consumers.

The Natural PRO-Digest solution combines FrieslandCampina Ingredients's prebiotic Biotis GOS-OP High Purity and Lallemand Health Solutions' probiotic B. lactis Lafti B94 to create synergistic benefits that support gut comfort.

Sophie Zillinger, Global Marketing Lead at FrieslandCampina Ingredients, explains: "Prebiotic Biotis GOS-OP High Purity is a high-purity galacto-oligosaccharide (GOS) which increases Bifidobacterium in the gut, promotes gut comfort and has a positive influence on occasional constipation in adults by increasing defecation frequency and easing defecation. This prebiotic also reduces gastrointestinal symptoms such as bloating and flatulence."

Romane Maillet, Marketing Group Manager at Lallemand Health Solutions, adds: "Selected from among 40 bifidobacteria strains for its good synergy with prebiotics, probiotic B. lactis Lafti B94 has been studied in nine clinical studies on gut health from infancy to adulthood. It supports a healthy microbiota, reinforces gut barrier integrity, increases the production of short-chain fatty acids, and helps support abdominal comfort when experiencing occasional bloating or constipation."
