This collaboration marks a significant step in Corbion's ongoing commitment to supporting environmentally and socially responsible aquaculture practices

This collaboration marks a significant step in Corbion's ongoing commitment to supporting environmentally and socially responsible aquaculture practices

Corbion, the sustainable ingredients company that champions preservation through the application of science, announced its new role as an associate member of the Sustainable Shrimp Partnership (SSP). This collaboration marks a significant step in Corbion's ongoing commitment to supporting environmentally and socially responsible aquaculture practices.

By joining SSP, Corbion aligns with like-minded industry leaders to help shape the future of sustainable shrimp farming. Through shared values such as transparency, accountability, and collaboration, Corbion aims to contribute meaningful solutions to the challenges facing global aquaculture, particularly through innovations like its algae-based Omega-3 feed ingredient that supports resilient supply chains.

"Aquaculture is key to ensuring global food security, and we strongly believe its development should be guided by sustainability principles. At Corbion, we work to promote preservation across the board in food, food production, health, and the planet. As our AlgaPrime DHA – the world's leading source of algae-derived omega-3 – continues to grow in shrimp farming, joining SSP is both a logical and exciting step for us. By joining SSP, we help build a more proactive and conscientious industry while reaffirming our commitment to the aquaculture industry that advances through collaboration, innovation, and respect," said Lena Røg Richard, Global Business Development Manager, Aquaculture.
