This strategic investment by Kemin Nutriscience: Pet Food and Rendering Technologies underscores Kemin's commitment to scientific innovation and the continuous expansion of its expertise in gut health

Kemin Industries, a global ingredient manufacturer that strives to sustainably transform the quality of life every day for 80 per cent of the world with its products and services, announced the acquisition of Bactana, a research-driven company specialising in advancements in intestinal health and fermentation technology. Bactana was launched from Cornell University's McGovern Centre in 2017 and currently operates from UConn's Technology Incubation Program (TIP).

This strategic investment by Kemin Nutriscience: Pet Food and Rendering Technologies underscores Kemin's commitment to scientific innovation and the continuous expansion of its expertise in gut health.

"Compelled by curiosity, we are reinforcing our dedication to developing novel solutions that support metabolism, immune function, and overall well-being by combining Bactana's cutting-edge research with our existing expertise," said Kimberly Nelson, President of Kemin Nutriscience. "This acquisition aligns with our long-term vision to explore emerging technologies in intestinal health and further strengthen our position as an industry leader."

As part of this integration, Kemin Nutriscience will leverage its global resources and scientific expertise to advance research and accelerate the development of innovative solutions in this evolving field. The acquisition represents another step forward in its mission to enhance health and nutrition through pioneering science and technology.

"We are incredibly grateful to our employees, advisors, and shareholders for their support and confidence in our vision over the past six years, and we believe Kemin is the ideal partner to help advance our technology and expand its potential global impact," said John Kallassy, CEO of Bactana Corp.
