Circus SE receives official supplier certification for US government institutions

18 June 2025 | News

First AI-robotics company in the global food-service sector to become an officially certified U.S. Government supplier

First AI-robotics company in the global food-service sector to become an officially certified U.S. Government supplier

Circus SE, a global leader in AI software and robotics for the food service industry, has officially been approved as a supplier for the US Government and its armed forces worldwide.

The certification grants Circus access to U.S. federal procurement programs and contracts, including those of the Department of Defence and the global U.S. military, marking a key milestone in the companyâ??s international expansion strategy.

As the first AI-robotics player in the global food-service sector to achieve this highly regulated status, Circus is now positioned to participate in federal supply contracts across military and government agencies. This regulatory clearance accelerates the strategic deployment of its autonomous, AI-powered cooking systems, CA-1 and CA-M, within U.S. defence initiatives and dual-use technology programs.

â??This approval unlocks the next stage in executing our international strategy in the defence and public sector,â? says Nikolas Bullwinkel, CEO and Founder of Circus SE. â??It confirms our operational maturity, strengthens our geopolitical presence, and opens the door to high-impact, security-critical applications.â?

Following the recent appointment of Sasha Borovik as General Counsel, formerly head lawyer for Microsoftâ??s global public sector business, Circus further strengthens its US market access and public sector capabilities. The certification positions Circus as a trusted partner for government institutions and paves the way for state-backed revenue, long-term contracts, and global defence collaborations.
