Corbion secures Chinese regulatory approvals for algae-derived Omega-3 DHA products

08 July 2025 | News

Corbion received several crucial registrations from GACC for its omega-3 products, marketed under the AlgaPrime DHA and AlgaVia DHA brands

Corbion received several crucial registrations from GACC for its omega-3 products, marketed under the AlgaPrime DHA and AlgaVia DHA brands

Corbion, a global leader in sustainable ingredient solutions, has successfully secured multiple regulatory approvals from Chinaâ??s General Administration of Customs (GACC), paving the way for offering Corbionâ??s high-quality, sustainable, algae-derived omega-3 DHA solutions in Chinaâ??s fast-growing human and animal nutrition segments.

Corbion received several crucial registrations from GACC for its omega-3 products, marketed under the AlgaPrime DHA and AlgaVia DHA brands. Both brands are premium algae-derived omega-3 products designed to meet the growing demand for high-quality animal nutrition as well as plant-based human nutrition and nutraceutical solutions in China. With all regulatory steps now completed, Corbion is ready to bring its algae-derived nutrition solutions to market in China across both human and animal applications, where demand for sustainable and traceable ingredients continues to increase.

â??China is an important and fast-growing market for algae-derived omega-3 solutions in both food and feed,â? said Tim Rutten, Vice President Nutrition & Pharma at Corbion. â??With these registrations and licenses in place, we can now offer Chinese customers and partners our proven ingredients that align with their focus on quality, safety, and sustainability.â?
