Duni Group Unveils Sealable Ronda Paper Bowl to Cut Food Waste and Plastic Use

28 April 2026 | News

The sealing provides a leak-resistant, tamper-evident and hygienic package that protects the meal throughout the distribution chain

The sealing provides a leak-resistant, tamper-evident and hygienic package that protects the meal throughout the distribution chain

Duni Group launches Sealable Ronda, a sealable paper bowl for salads and bowl meals, developed within the Duniform brand. By combining paper with hermetic sealing and modified atmosphere packaging (MAP), the solution enables longer freshness for ready-to-eat meals, reduced food waste and secure handling throughout the distribution chain, while reducing the relative use of plastic.

Demand for ready-made salads and bowl meals continues to grow, while food waste remains one of the main sustainability challenges within the ready-meal segment. At the same time, food producers and retailers face increasing demand for packaging solutions that can extend shelf life, perform safely in logistics and retail environments, and respond to the need for alternatives with lower plastic content. Sealable Ronda has been developed to meet these requirements by enabling hermetic sealing and modified atmosphere packaging (MAP) in a paper-based format, supporting additional days on the shelf and reducing the risk of food being discarded. Compared with plastic-based Duni bowls of a similar size, the solution features more than 85 per cent lower plastic content and more than 50 per cent lower COâ?? emissions.

The sealing provides a leak-resistant, tamper-evident and hygienic package that protects the meal throughout the distribution chain. It reduces the risk of leakage, supports safer transport, and enables cleaner handling in both logistics and retail environments. The visible seal also makes it easy for consumers to see that the package has not been opened. At the same time, the solution responds to a clear market demand: the ability to seal paper bowls and thereby combine a high share of renewable material with functionality that has long been standard in plastic packaging.

"Reducing food waste is one of the most effective ways to lower the climate impact of food. With Sealable Ronda, we enable our customers to keep ready-to-eat meals fresh for longer, while offering a secure, sealed solution in paper. This strengthens both food safety and confidence throughout the value chain," says Marie Davies, Category Manager Trays and Films at Duni Group.

The round bowl format is adapted for modern food concepts such as salads, bowls, sushi and poke bowls and provides a clear and appetising presentation on the retail shelf. The format is easy to stack and handle in store and is suitable for both hot and cold dishes. Sealable Ronda is made from FSC-certified and other controlled materials and can be printed, enabling producers to communicate content, origin and brand directly on the packaging.
