Greenspace Herbs Launches Morimin Moringa Blend for Daily Mineral Nutrition

14 October 2026 | News

The Bengaluru-based companyâ??s new blend pairs Moringa oleifera leaf powder with a standardised leaf extract, backed by stability, safety and human studies

Greenspace Herbs, a Bengaluru-based herbal extracts and nutraceutical manufacturer, announced the launch of Morimin, a Moringa leaf blend designed to fill a quiet gap in modern diets: everyday minerals. Morimin combines Moringa oleifera leaf powder with a Moringa leaf extract, delivering minerals, dietary fibre, plant protein and healthy fats from a single botanical source.

Greenspace unveiled Morimin at Nutraverse in India, and it is now available to nutraceutical and food brands in India and the United States. The launch marks Greenspace's move to take a traditionally Indian superfood to global supplement shelves with the science to support it.

The body runs everyday metabolism on minerals: calcium and magnesium for bones and muscles, potassium for fluid balance, iron for oxygen transport, zinc and copper for enzyme function. Yet diets built on refined, processed food rarely supply them with the proportions the body expects.

Moringa oleifera, known across India as the drumstick tree or sahjan, has been part of Indian kitchens and Ayurvedic practice for centuries. Its leaves are among the most nutrient-dense edible greens known. Laboratory analysis of Morimin shows, per 100 g, about 2,218 mg of calcium, 2,905 mg of potassium, 1,483 mg of magnesium and 13.3 mg of iron, alongside 18 g of protein and 18 g of dietary fibre, with zero added sugar.

Global interest in plant-based, whole-food nutrition has turned Moringa from a backyard tree into one of the most searched-for greens in the wellness aisle. Morimin is Greenspace's answer to a simple consumer question: if Moringa is this good, how do you get it in a form that is consistent, tested and easy to take every day?

Most Moringa products on the market are simply dried, ground leaf. Morimin is different by design: it blends whole leaf powder with a Moringa leaf extract, in proportions developed by Greenspace's R&D team.

Leaf powder keeps the whole-leaf matrix intact: fibre, protein, carbohydrates and the natural mineral package of the leaf.

Leaf extract concentrates the leaf's naturally occurring plant compounds, such as polyphenols and flavonoids, into a smaller, more consistent quantity than powder alone can carry.

Together, they offer the nutrition of the whole leaf with the consistency and concentration of an extract, which is what supplement makers and consumers look for in a daily product.

Morimin was developed and is manufactured at Greenspace's factory and R&D facility in Magadi taluk, Karnataka. Greenspace brings its experience in herbal extraction to every stage, from leaf sourcing and drying to extraction, blending and quality testing, so that each batch delivers a consistent profile.
