

TopGum Unveils No-Added-Sugar Gut Health Gummies Featuring Probiotics, Prebiotics and Postbiotics

21 October 2026 | News

The new gummy collection delivers targeted gut health ingredients through the company's proprietary fiber-based sweetening platform, providing complementary support for gut health

Leading nutraceutical gummy formulator TopGum Industries, Ltd., unveils a holistic supplement line targeting gut health. The new line includes probiotic, prebiotic, and postbiotic gummies in fruit flavors with no added sugars, built on TopGum's patented Gummiceuticals fiber-based platform. TopGum will introduce the new line at SupplySide Global 2026 at Mandalay Bay in Las Vegas.

"Consumers are increasingly discovering that what happens in the gut influences so much more than digestion alone," explains Eyal Shohat, CEO of TopGum. "This awareness is transporting gut health into the core of modern wellness. We selected this fast-growing health category to meet consumers' desire to combine wellness with an enjoyable daily treat. The innovation goes far beyond incorporating prebiotics, probiotics, and postbiotics into a gummy. It means protecting the ingredients and their bioavailability while delivering appealing fruit flavors, colors, and the right texture, all without adding sugar. Achieving this balance takes dozens of formulation trials, sensory panels, and laboratory tests. Reimagining the traditional supplement pill as a yummy gummy that consumers look forward to taking is the magic behind our day-to-day work."

An Akkermansia gummy creation is the anchor concept in the company's newly launched portfolio of gut wellness gummies. The product was developed together with The Akkermansia Company, the world leader in the field, and primarily targets the North American market. Each gummy contains a potent 10 billion TFU (Total Fluorescence Units) dose of the branded ingredient, Akkermansia TAC-01 developed by The AKKERMANSIA Company (TAC). This pasteurized, highly bio accessible, postbiotic form of Akkermansia muciniphila TAC-01 is designed to remain stable through the acidic environment of the stomach.

The naturally occurring beneficial bacterial strain discovered by TAC is scientifically backed to support metabolic wellness and weight management, largely through its role in strengthening the gut barrier. Beyond helping to reduce inflammation,

scientific findings have linked Akkermansia to improvements in metabolic markers and GLP-1 release, which may further support healthy weight management.

The natural pineapple-flavored gummy leverages functional prebiotic chicory fructo-oligosaccharides (FOS) as the sweetening system. This unique gummy matrix offers an advanced, consumer-friendly supplement format that is clean-label, free of added sugars, and delivers the clinically recommended daily dose in just one fruity chew.
