Blue Planet, Yasasu Green to deliver sustainable food waste solutions in Asia

13 December 2018 | News

Blue Planet Environmental Solutions, a Singapore-headquartered end to end sustainable waste management company, has announced its recent acquisition of Yasasu Environmental Management Services, a decentralized organic waste processing company based in India.

Yasasuâ??a self-contained and compact digesters can process one to five tonnes of organic waste.

Blue Planet Environmental Solutions, a Singapore-headquartered end to end sustainable waste management company, has announced its recent acquisition of Yasasu Environmental Management Services, a decentralized organic waste processing company based in India.

With this acquisition, Blue Planet now offers an innovative solution to process organic waste through decentralised containerised technology to solve Asiaâ??s growing urban waste problem.

Yasasuâ??a self-contained and compact digesters can process one to five tonnes of organic waste such as leftover food, vegetable and fruit peels, garden waste and sludge, making it ideal for locations that require decentralised processing solutions.

Yasasu Greenâ??s dedicated team of technical experts and thought leaders have designed a small scale containerized product to treat waste at source based on DRYCO-ADTM technology.
